Abhishek Garg

Full-Stack Developer | Python, JavaScript, React, Node.js | Building Scalable Solutions | Passionate About Automation & AI Integration
Greater Vancouver Metropolitan Area

Summary

Hi there! I'm a versatile Full-Stack & Web Developer with a passion for creating scalable, clean, and impactful digital solutions. With solid experience in Python, JavaScript, React, Node.js, SQL, and HTML/CSS, I specialize in building responsive websites, intuitive user interfaces, and automated backend systems that drive real results.

From developing modern, fast-loading websites for clients to building internal tools and automation pipelines, I've tackled a wide range of projects. One of my recent highlights: an AI-powered YouTube Shorts automation system using ChatGPT, InVideo, and Playwright, cutting 90% of the manual work and accelerating content production.

I love working on end-to-end development—from brainstorming product ideas to launching polished platforms. Whether it's building custom web apps, automating tasks, or enhancing UI/UX, I approach each challenge with curiosity, creativity, and code.

Open to opportunities in web development, full-stack roles, automation projects, and AI-integrated solutions. I thrive in collaborative environments and always aim to learn, build, and grow.

Let's connect—happy to chat about tech, ideas, or potential opportunities!

Experience

YouTube Automation
Automation Specialist
April 2025 - Present (6 months)
Vancouver, British Columbia, Canada

AI-Powered YouTube Shorts Automation Project

Designed and developed a full automation pipeline for generating and posting YouTube Shorts and Instagram reels using Python, ChatGPT, InVideo, and

Playwright. The system automatically generates video scripts, creates visuals via InVideo, and handles browser automation for seamless uploading. This project reduced manual workload by 90% and enabled consistent, scalable content delivery—perfect for personal branding and growth marketing.
